- **Removes Bugs, Tar, Wax, Oil, Adhesives, Silicone & More**
- **Ready To Use**

- **Dries Quickly**
- **Leaves No Film or Residue**
- **VOC Compliant**

C-62 **CAL-SOLV™** **Multi-Purpose Solvent**

FEATURES AND BENEFITS

This multi-purpose solvent combines powerful penetrating and degreasing agents in a more environmentally friendly formula that reduces VOC's to less than 40% by weight. Meets California's strict VOC requirements. Removes TAR, WAX, BUGS, oil, grease, silicone, adhesive residue and other contaminants from a variety of surfaces. Can also be used for diluting, dissolving or dispersing other organic materials. Dries quickly and leaves no surface residue.

WHY: In California, a law/ordinance was passed that products, such as PRO®-SOL™ and POWER-SOL™, would have to be reduced to 40 or less VOC's (Volatile Organic Compound) omissions into the atmosphere. This law went into effect January 1, 2002. A product had to be created to meet the law requirements and also the detailers' requirements for performance.

WHAT: CAL-SOLV™ is an emulsion of

powerful cleaners and aromatic solvents. The VOC's are less than 40 and the flash point is 105 degrees F, which makes it combustible, but not flammable.

We have created a wonderful working product that is better on the atmosphere, has a better fire rating and is packaged in one-gallon plastic (poly) gallons, rather than the metal cans.

RECOMMENDED FOR

CAL-SOLV™ was formulated primarily as a tar and wax remover. It's also great for removing bugs, silicone, adhesive residue, grease and road film on exterior painted surfaces. It is so powerful, it takes off black ink marks, light oxidation and paint overspray. Ideal for body shop use in preparing painted surfaces for good adhesion of subsequent new paint coats.

APPLICATION

Directions: Shake well before using. Some

separation of ingredients may occur. For your protection, safety glasses and rubber gloves are recommended while using this product. See MSDS for additional precautions. Do not use on clear plastic surfaces. Saturate a clean cloth with CAL-SOLV™ and wipe the surface thoroughly to remove contaminants. While surface is still wet, wipe off immediately with a clean, dry cloth. Stubborn areas may require a second application.

SPECIAL NOTES

Do not use on clear plastic surfaces. Do not leave on substrate for prolonged period of time, as damage may occur. Although CAL-SOLV™ will not harm or discolor most materials, always test first in a small out-of-sight area before using.
