Smoke & Odor Eliminator™

FEATURES AND BENEFITS

Smoke & Odor Eliminator is an industrial strength deodorizer and germicide that removes odors like tobacco stench, urine, food spills, mold, mildew, sickness residues, body odor, blood, pet odors, viral malodors and other unwanted odors trapped in carpeting, upholstery and fabrics as well as hard surfaces. Most offensive odors are organic. These organic malodors are produced when bacteria feed on residues left from protein based spills like food and excretions (human or animal). Smoke & Odor Eliminator's active ingredient kills the bacteria that cause odors on contact, neutralizing the odor at its source while leaving a clean, fresh fragrance. Smoke & Odor Eliminator is safe for use on most surfaces. Can also be mixed with PRO® waterbase cleaners to control odors and mildew.

RECOMMENDED FOR

New & used car dealerships, auto auctions and rental car agencies are prime users as well as car washes and detail shops that include odor removal as a up-sale option

in their reconditioning process. Don't limit your Smoke & Odor Eliminator usage to the automotive market. It's also great for use in RV's, boats, airplanes, homes, offices, restaurants, retail stores, schools, janitorial services, hotels, kennels, bathrooms and anywhere malodors persist.

APPLICATION

Directions: Shake well before using. For your protection, safety glasses are recommended while using this product. Remove all residues in affected area. Surface should then be cleaned and shampooed. Remove any excess moisture with a wet/dry vacuum or allow to dry. Excess moisture or humidity will increase the chance of bacteria to multiply and the malodor to return. Apply Smoke & Odor Eliminator directly to all affected areas using a sprayer. Spray with a criss-cross pattern to ensure product makes contact with bacteria embedded in fibers. Use a fine mist when applying to headliners to avoid saturation. Application may also be made by fogging, mopping or sponging. Allow proper ventilation while applying. After applying, close area to ventilation (Roll up

windows in vehicles) for 30-60 minutes and allow to dry. When the product & fragrance has dissipated (24 hours), Smoke & Odor Eliminator has performed its job, killing all remaining bacteria and permanently removing the malodor. For other uses, spray on surface or into the air where odors persist. Reapply product if malodors return.

Mixing with waterbase cleaners: Mix 8 oz. to one gallon of diluted cleaner solution

For HVAC Treatment: Start engine, turn on A/C and set fan to high with fresh air vent open. Spray 2-3 pumps directly into all fresh air intakes located outside the vehicle, usually under the hood, below the windshield wipers. Turn to heat and repeat process.

SPECIAL NOTES

WARNING: FLAMMABLE MIXTURE. DO NOT STORE OR USE NEAR FIRE OR FLAME. Do not spray on clear plastic or instrument panels.

PACKAGING

22 OZ. BOTTLES/W SPRAYER/12 PER CASE
1 GALLON/4 PER CASE
