## P-38-Q RV, BOAT & AIRCRAFT WAX™

### FEATURES AND BENEFITS

P-38-Q RV, BOAT & AIRCRAFT WAX™ is an easy to use, scientifically formulated, pre softened gel that provides outstanding protection and inhibits color fading on many surfaces. A unique blend of cleaners, carnauba and other quality waxes. Effectively cleans without harsh abrasives which scratch the surface and damage expensive decals and painted insignias. Quickly removes dull film, oil smudge, oxidation and light scratches on all painted, gel coat, fiberglass, chrome and aluminum surfaces. This superb, corrosion resistant wax leaves a beautiful, glass-like finish in one quick operation. Leaves a high gloss, carnauba wax shine that lasts for months.

### RECOMMENDED FOR

P-38-Q was specifically designed to provide lasting protection against prolonged exposure to harsh weather. Use on all painted, gel coat, fiberglass, chrome and aluminum surfaces.

- RV's: Removes oxidation, road grime and

black streak marks near joints while leaving a high gloss shine.

- **BOATS:** Removes fresh and salt water marine build-up and gives new life to gel coats. Protects against prolonged exposure to sun and salt air.
- **AIRPLANES:** Removes jet fuel build-up and wing tank spill off. Reduces surface tension for maximum air speed, handling and fuel efficiency.
- **PLEXIGLASS SURFACES:** Cleans and removes fine scratches that distort vision and clarity.

### APPLICATION

Directions: Shake well before using. N.I.O.S.H. approved respirator and safety glasses are recommended while using this product. For hand or machine use.

Hand Use: Pour P-38-Q onto a wax applicator and apply to paint surface, rubbing well in a circular motion. Allow to dry, then wipe with a PT-8 Microfiber Towel to a high luster. Keep turning cloth while wip-

ing down.

Orbital /DA Use: Apply P-38-Q to bonnet. Turn on Orbital and spread product over surface. Allow to haze, then buff to a high gloss with a clean bonnet.

High Speed Buffer: Apply P-38-Q to a wax applicator and spread uniformly over small area of paint surface before buffing. Buff with adequate pressure @ 1400 to 2300 RPM's. As product dries, reduce pressure and burnish to a high gloss, using a VC-80-C wool cutting pad. Clean pad at regular intervals.

### SPECIAL NOTES

Keep from freezing. For best results, apply a thin, even coat of P-38-Q to the finish. P-38-Q also removes fine scratches from plexiglass as found in hockey rinks, car washes, etc... Can be used to maintain optic clarity on all plastic surfaces.
