## SYNERGY TRIM COATING

### Product Description:

Synergy Trim Coating is an innovative automotive trim restoration product that brings faded interior and exterior trim back to a factory appearance. Synergy is a special formula engineered specifically to restore, protect and seal trim surfaces made of rubber and plastic. Our unique formula combines advanced polymer technology to provide a super hydrophobic, long lasting, protective finish.

Keeping vehicle trim looking showroom new involved applying and reapplying silicone based products for only temporary results. Synergy Trim Coating is not a dye or dressing. Most silicone products are usually tacky, shiny, slippery and attract dust. Synergy Trim Coating is none of these. It is a complete trim restoration and protection coating that renews and prolongs the factory finish. It will restore natural color to trim without the use of dyes and provides a deep, rich, long lasting look without the "wet look" shine that dries quickly with no unwanted slick, greasy residue.

The advanced trim coating will restore and prolong the factory-new appearance to plastic and rubber trim on any vehicle. When applied, Synergy Trim Coating utilizes bonding agents for maximum protection on textured plastic and rubber. Once cured, its innovative nano-polymer formula penetrates deep and binds to the surface giving back the life and color taken away from long-term exposure to UV rays to produce a clean, dark, impervious surface.

This bond creates a clear barrier that inhibits UV rays, resists micro marring and etching, creates hydrophobicity to bead and repel liquids, prevent water spots, fading, discoloration, and contaminant build-up.

Exterior plastic pieces are much more susceptible to damage caused by harsh UV rays and extreme weather. If exterior trim and rubber pieces are not protected from day one, they start to fade due to contact exposure to the elements. UV rays break down the molecular bonds causing it to fade. Synergy Trim Coating contains intensive UV-inhibitors that provide a protective barrier blocking UV rays to help prevent trim from future fading and discoloring, keeping it as vibrant as ever and providing a long-term solution.

Synergy Trim Coating creates a transparent shield that resists all types of weather conditions. The durable trim coating provides months of weatherproof protection against the elements. The protective trim coating blocks out UV rays in extreme heat and insulates the surface to prevent cracking in bitter winter cold.

The soft nature of plastic and rubber surfaces make trim especially prone to micro marring and etching. Featuring a 4H hardness rating, Synergy Trim Coating bonds at the molecular level to create a hardened coating that helps resist fine scratches and scuffs.

The innovative trim coating uses super hydrophobic technology to repel water and moisture from the trim surface. Hydrophobicity prevents liquids from clinging to trim surface, so they'll sheet right off in a rinse, preventing water spots and stains. Also, contains anti-static properties, which resist dirt, dust and contaminant build-up.

Synergy Trim Coating finishes dry to the touch, provides a semi-gloss finish on trim that restores and protects for up to 12 months.

Synergy Trim Coating provides easy cleaning effect. When applied, it creates an invisible, highly durable shield against water, road salt, ice, tree sap, chemical & airborne contaminants and other harsh elements that wear away that showroom new appearance.

Use on cars, trucks, buses, motorcycles, RV's, heavy equipment, boats and planes. Apply to dashboard, interior plastic, bumpers, decorative panels, door handles & trim, truck bed covers, plastic side mirrors, windshield wiper cowls, wheel wells, mud flaps, grills, running boards, rubber trim around windows & all faded plastic trim. May also be used on tires. Apply to tires for a shine that lasts in all weather conditions and car washes. Synergy Trim Coating is heat resistant making it the perfect coating for protecting the engine compartment.

### **Features & Benefits:**

- Renews & Protects Plastic & Rubber Trim
- Restores Factory Appearance Finish Instantly
- Super Hydrophobic
- Chemical & Heat Resistant
- Excellent UV Protection
- Easy to Apply
- Self Cleaning Effect
- Durability: Up to 12 Months

### **Directions:**

1. Clean surface using C-10 All Purpose Cleaner to remove dirt and contamination.
2. Trim should be cool to the touch and dry for best results. Apply in a shaded, dust free area.
3. Shake well before using. Pour Synergy Trim Coating slowly onto foam applicator block until saturated.
4. Apply a thin coating and spread over a small area on the trim using a crisscross pattern to maintain even coverage. Apply more product as needed to keep a wet, even application.
5. Allow coating to penetrate for 1 minute. Buff with a clean, dry microfiber towel.
6. Repeat steps 4-5 until all exterior trim surfaces are coated.
7. Allow to cure for at least 24 hours before exposure to water or the environment.

### **Notes:**

- Use recommended personal protective equipment
- Recommended application temperatures 40° F - 90° F
- Do not apply in direct sunlight or to hot surface
- Coating bonds with clean trim only
- Apply multiple coats until coating absorbed and surface is uniform
- Avoid contact with painted finish and glass
- Keep the bottle closed when not in use. Store in a cool dry place and out of direct sunlight
